

NEVER BE LOCKED OUT OF A CLASSROOM AGAIN!

This unique Mul-T-Lock locking mechanism has been designed to prevent pupils from locking classroom doors for reasons of being disruptive, a problem of increasing concern in many schools today.

Teaching staff can gain access to the classroom at all times due to a very innovative feature employed within the cylinder mechanism.

In addition, pupils can always exit the room by means of the single action internal thumb-turn mechanism used within the room, that will only permit the pupil to un-lock the door.

Mul-T-Lock School Cylinders eliminate the possibility of pupils from being inadvertently locked in rooms by caretaking staff!

Available in European Profile or UK Oval in 70mm symmetric or asymmetric sizes incorporating a 35mm Thumb Turn. All options can be supplied keyed to differ, keyed alike or master-keyed.

Lock cases and handles available to suit cylinders if required.
